

NCPE Assessment

Plain English Summary

March 2025

Drug name: Mosunetuzumab
(pronounced moh-SUN-eh-TOO-zoo-mab) as monotherapy for the treatment of adult patients with relapsed or refractory follicular lymphoma (FL) who have received at least two prior systemic therapies.

Brand name: Lunsumio®

HTA ID: 23023

What is the NCPE?

The National Centre for Pharmacoeconomics (NCPE) is a team of experts who look at the health benefits and costs of medicines. The HSE asks us to advise on whether or not a new medicine is good value for money. We give unbiased advice to help the HSE provide the most effective, safe and cost-effective (value for money) treatments for patients.

How do we make our recommendations?

Our main focus is on the health benefits and cost effectiveness of a medicine. We look at the wider costs and health benefits associated with a new medicine, for example:

- Does the new medicine work better than other treatments available in Ireland?
- Is the new medicine easier to give or easier to take compared with other treatments available in Ireland?
- Does the new medicine reduce the need for patients to be hospitalised?
- Does the new medicine improve the quality of a patient's life over other treatments available in Ireland?
- Will the new medicine save resources elsewhere within the health system?

We review the information from clinical trials along with the cost and value for money data presented by the pharmaceutical company. We ask doctors and other healthcare professionals for advice about any health benefits of the new medicine compared with current treatments. We also ask patient organisations to send us their views on how the new drug may improve patients' day-to-day experience of living with a disease.

What is mosunetuzumab used for?

Mosunetuzumab is a cancer medicine used to treat adults with follicular lymphoma that does not respond to (refractory) or has come back (relapsed) after at least two previous treatments. Follicular lymphoma is a cancer that affects a type of white blood cell called B lymphocyte.

What recommendation has the NCPE made to the HSE?

We have recommended that the HSE should consider not funding mosunetuzumab. The HSE will consider our recommendation and make the final decision about reimbursement (funding). When making the funding decision, the HSE will also consider the additional [criteria](#) outlined in the Health (Pricing and Supply of Medical Goods) Act 2013.

Why did we make this recommendation?

After reviewing the data presented by the pharmaceutical company, we concluded that it is not clear that mosunetuzumab works as well or better than other medicines that are used to treat this condition. The cost of mosunetuzumab is higher than other medicines that are used to treat this condition and mosunetuzumab does not appear to be good value for money.

Next steps

When the HSE receives our recommendation, it will look at all the relevant data about mosunetuzumab. The HSE makes the final decision on reimbursement.

Where can I get more information?

You can get more information about mosunetuzumab from the following online options:

- the NCPE Technical Summary Document
- Lunsumio® European Public Assessment Report (EPAR) – [Summary for the Public](#) , or
- searching for mosunetuzumab on our website (www.ncpe.ie);
- searching for mosunetuzumab on the European Medicines Agency (EMA) website (www.ema.europa.eu).

Please refer to the NCPE website for updated information on the reimbursement status of this medicine
